

## *PROJECT U.S.A.*

The United States Cabinet has set up a committee to study how the beliefs and values of ancient cultures, such as Greece and Rome, affect how we live today. They are requesting a presentation that analyzes how civilizations are shaped by physical and emotional influences that result in innovation or roadblocks.

To do this we must take a deep look into the past. This will help gain an understanding of how we can take advantage of future opportunities that lead to innovation and overcome challenges that create roadblocks. You will compile a study of both Ancient civilizations and a hyperlinking narrative presentation that shows how the past impacts the present and how the present predicts the future of humanity!
